

Part A: Short Theory Questions

1. What does HTML stand for?

HTML stands for **HyperText Markup Language**. It is used to create and structure web pages.

2. What is the difference between a Tag and an Element?

A **Tag** is a keyword enclosed in angle brackets, such as `<p>`. An **Element** includes the opening tag, content, and closing tag, such as `<p>Hello</p>`.

3. What is an Attribute?

An **Attribute** provides additional information about an HTML element and is written inside the opening tag. Example: `src` in ``.

4. What is Semantic HTML?

Semantic HTML uses meaningful tags such as `<header>`, `<nav>`, and `<footer>` to clearly describe the content and structure of a webpage.

5. Why is the alt attribute important for images?

The **alt** attribute provides alternative text for an image if it cannot be displayed and improves accessibility for visually impaired users.
